Using a simple, but powerful solution, you can start having your data encrypted and stored offsite within 48 hours of contacting Mastermind Data Backup.

Mastermind can offer a secure, offsite and completely automated solution with instant restorations of individual files to alleviate your time strapped IT staff.

Mastermind eliminates costly in-house tape backup systems, expensive software licenses for business-grade backup and high powered backup equipment. Eliminate significant time commitments to allow your IT staff to focus on helping your business grow.

Mastermind Data Backup systems are powered by IQ Storage™ which services a wide variety of financial institutions, from banks to insurance providers, to military defence contractors. This technology backs up data from companies who have built some of the world's largest structures, including the US Pentagon.

IT staff face some tough challenges today. Demand for more storage continues to grow along with the need for increasingly resilient storage infrastructures to support doing business on demand.

Compliance with legal, governmental and other industry specific regulation is also

driving new data retention requirements. Mastermind Data backup is the solution to these issues.

Restorations are easy. Just pick a date, select either a file or the whole drive and your data is restored with one click.

Mastermind Backup services provide a simple, turnkey solution for the backup of critical data.

With Sarbanes-Oxley and HIPAA requirements for data retention and management data, backup is critical.

"I spent months and \$30,000 to recover our data after a fire and something I didn't think of, the sprinklers caused 3" of water and ruined 8 computers out of the 25, if we would have had this system installed I would have avoided all of this"
Charles Lyall - Eurolite

I just spent \$1,800 recovering data from a laptop that crashed. The cost of offsite backup is peanuts compared to the headaches caused from the loss of data.
Sprios Christopolous - Gem Windows and Doors

WHAT DATA DO YOU HAVE TO LOSE ?
