

Q-File can handle 1 to 250 users, and it's easy to use with minimal training required. And here's the best part, **Q-File** can be completely customized to any small or medium size business that provides a service or product.

No need to try and fit your production processes and office procedures into an off-the-shelf computer program that is not designed for the way you do business. **Q-File** can be easily adapted to suit the needs of virtually any organization.

Bet you think that this customized computer program must be expensive?

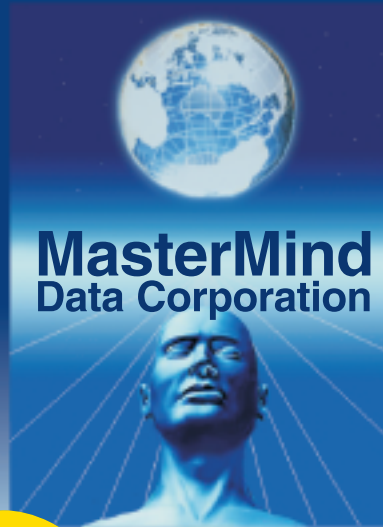

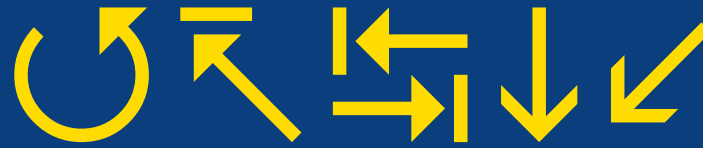

Q-File can start at less than \$2,500 for small businesses and increases in price depending on customization, the number of employees, volume of sales and licensing.

Q-File is also fully compatible with all Microsoft® operating systems, Apple®, Linux® servers, OS web and mobile server based platforms.

It's OK to dream - with Q-File you can dream big!

Customized Business Software

Clarity

It's OK to dream - *to dream about growing your business and achieving success.*

We dream too - *about helping you live your dream!*

Simplicity

Many businesses can't achieve their dreams because they don't have a clear understanding of "where" they are or "what" they need to do to make their dreams reality. That's because their business software only provides fragmented snap-shots of a moment in time rather than a minute-by-minute analysis making it possible to respond quickly to potential problems and market conditions.

Achieving that dream can be as simple as using just one business software program all day long. No need to switch from a contact manager to a spreadsheet to a word processor to an accounting package!

Now dream bigger - how about a business software program that can tell you in an instant the status of your inventory, all past, present and future sales data including quotes and invoicing, the location of an order anywhere in production, warehousing and shipping process, and much more!!

No need to dream - it's finally here and it does it all. It's called...

Q-File

Most business software is designed from an accounting point-of-view and is not flexible enough to handle all your business management needs. Adapting these programs to your business is like trying to drive a square peg into a round hole.

Q-File is that perfect fit. It is designed to track how you do business with your customers and clients. It keeps track of your product and services every step of the way.

The "Q" in **Q-File** is for "queuing" and it enables each department or area in your company to complete its part of the process in a timely manner and then pass the customer order to the next step - all using the same computer program.

In fact, in the blink of an eye, you can identify potential problems before they happen.

Grace

All those functions without changing programs! **Q-File** completely replaces contact management programs such as Maximizer®, Act®, Goldmine®, etc. You no longer need to quote using Microsoft® Excel®, Word® or Quattro Pro®, etc. Letters, labels and envelopes - no problem. And **Q-File** is completely compatible with your existing accounting program including Quickbooks®, Simply Accounting®, ACCPAC®, etc. **It's not a dream. Q-File does it all in one enterprise wide solution!**

What can it do? Just about everything your business will ever need including:

- Contact Management (CRM)
- Faxes
- Notes
- Email
- Calendar
- Quotes
- Order entry and confirmation
- Full inventory control including:
 - actual - allocated - available - rental and loan
- Full role based security
